

Practical No :-1

Aim :-Write a program to create a robot Without gear and move it forward, left, right .

Program :-**Movewithoutgears.java**

```
import ch.aplu.robotsim.*;
class Movewithoutgear
{
    Movewithoutgear()
    {
        TurtleRobot robot = new TurtleRobot();
        robot.forward(100);
        robot.left(90);
        robot.forward(50);
        robot.right(90);
        robot.forward(50);
        robot.exit();
    }
    public static void main(String[]args)
    {
        new Movewithoutgear();
    }
}
```

Output :-

Initial state :-

Turn left :-

Move Forward :-

Practical No :-2

Aim :-Write a program to create a robot With gear and move it forward, left, right .

Program :-**Movewithgear.java**

```
import ch.aplu.robotsim.*;
class Movewithgear
{
    Movewithgear()
    {
        NxtRobot robot = new NxtRobot();
        Gear gear = new Gear();
        robot.addPart(gear);
        gear.forward(2000);
        gear.setSpeed(30);
        gear.left(480);
        gear.forward(2000);
        gear.right(480);
        gear.forward();
        robot.exit();
    }
    public static void main(String[] args)
    {
        new Movewithgear();
    }
}
```

Output :-

Initial state :-

Turn left :-

Move Forward :-

Practical No :-3

Aim :-Write a program to create a robot with two motor and move it forward, left and right .

Program :-**MovewithMotors.java**

```
import ch.aplu.robotsim.*;
public class Movewithmotors
{
    public Movewithmotors()
    {
        NxtRobot robot = new NxtRobot();
        Motor motA = new Motor(MotorPort.A);
        Motor motB = new Motor(MotorPort.B);
        robot.addPart(motA);
        robot.addPart(motB);

        motA.forward();
        motB.forward();
        Tools.delay(2000);

        motA.stop();
        Tools.delay(1050);
        motA.forward();
        Tools.delay(2000);

        motB.stop();
        Tools.delay(1050);
        motB.forward();
        Tools.delay(2000);
        robot.exit();
    }
    public static void main(String[] args)
    {
        new Movewithmotors();
    }
}
```

Output :-

Initial state :-

Turn right :-

Move Forward :-

Final state :-

Practical No :-4

Aim :-Write a program to create a robot with light sensors to follow a line .

Program :-**LineFollower.java**

```
import ch.aplu.robotsim.*;
class LineFollower
{
    LineFollower()
    {
        LegoRobot robot = new LegoRobot();
        Gear gear = new Gear();
        LightSensor ls = new LightSensor(SensorPort.S3);
        robot.addPart(gear);
        gear.setSpeed(50);
        robot.addPart(ls);
        while(true)
        {
            int v = ls.getValue();
            if(v<100)
                gear.forward();
            if(v>300 && v<750)
